Re: MM Docket 99-25

Since the passage of the Telecommunications act of 1996, local ownership of radio stations has almost vanished, with the possibility of locally acquiring a station now almost impossible. Low power FM can provide a means of allowing communities an opportunity to support and enhance a local culture in a vastly homogenizing world - an avenue for people of all backgrounds to come together to appeal to the specific interests of their community. With an often overcrowded dial, low power stations may be the only viable way that space for such stations can now be created. The service that could be generated by small community stations is unlimited. The denial of access to such stations is a loss too great to consider.

We strongly support the intent of rule change proposal docket 99-25 in creating community opportunities on the public's airwaves. We do take issue with current considerations such as categorizing low power as a secondary service. A secondary service radio station could be bumped by any larger first class station wanting the space. This isn't viable community access. Low power stations need the flexibility to best meet their community needs, all wattage levels under 100 watts need to be considered. Preference must be given to stations providing community access, rather than being sold through auctions to the highest bidder, or allocated through lotteries. Local access stations must also be given priority over translators carrying out of state signals.

Community radio is the public interest. We ask you to make your decisions wisely.

Re: MM Docket 99-25

Since the passage of the Telecommunications act of 1996, local ownership of radio stations has almost vanished, with the possibility of locally acquiring a station now almost impossible. Low power FM can provide a means of allowing communities an opportunity to support and enhance a local culture in a vastly homogenizing world - an avenue for people of all backgrounds to come together to appeal to the specific interests of their community. With an often overcrowded dial, low power stations may be the only viable way that space for such stations can now be created. The service that could be generated by small community stations is unlimited. The denial of access to such stations is a loss too great to consider.

We strongly support the intent of rule change proposal docket 99-25 in creating community opportunities on the public's airwaves. We do take issue with current considerations such as categorizing low power as a secondary service. A secondary service radio station could be bumped by any larger first class station wanting the space. This isn't viable community access. Low power stations need the flexibility to best meet their community needs, all wattage levels under 100 watts need to be considered. Preference must be given to stations providing community access, rather than being sold through auctions to the highest bidder, or allocated through lotteries. Local access stations must also be given priority over translators carrying out of state signals.

Community radio is the public interest. We ask you to make your decisions wisely.

Re: MM Docket 99-25

Since the passage of the Telecommunications act of 1996, local ownership of radio stations has almost vanished, with the possibility of locally acquiring a station now almost impossible. Low power FM can provide a means of allowing communities an opportunity to support and enhance a local culture in a vastly homogenizing world - an avenue for people of all backgrounds to come together to appeal to the specific interests of their community. With an often overcrowded dial, low power stations may be the only viable way that space for such stations can now be created. The service that could be generated by small community stations is unlimited. The denial of access to such stations is a loss too great to consider.

We strongly support the intent of rule change proposal docket 99-25 in creating community opportunities on the public airwaves. We do take issue with current considerations such as categorizing low power as a secondary service. A secondary service radio station could be bumped by any larger first class station wanting the space. This isn't viable community access. Low power stations need the flexibility to best meet their community needs, all wattage levels under 100 watts need to be considered. Preference must be given to stations providing community access, rather than being sold through auctions to the highest bidder, or allocated through lotteries. Local access stations must also be given priority over translators carrying out of state signals.

Community radio is the public interest. We ask you to make your decisions wisely.
